

Tiny Track

Tangent is the smallest-profile line-voltage track lighting system available, the manufacturer says. Made of extruded aluminum and clear polycarbonate, the system can be used in straight arrangements, bent into architectural curves, or surface-mounted flush to ceilings and walls.

Lights can house four types of low-voltage lamps and come in three track styles: surface-mounted, suspended in a solid I-beam, or suspended in a perforated truss. Tangent has a silver finish and includes a selection of such fixtures as a floodlight for nooks and a spotlight. Lightolier. 508.679.8131. www.lightolier.com.

Field Elevations

Elevations, a line of modular, large-format field tile and decorative liners, can be used for indoor and outdoor floor and wall applications. Styles include iridescent and non-iridescent colors, along with flat or three-dimensional tiles. All tiles feature up to 86 percent recycled material.

The field tiles come in four sizes, and the six liners average 2 1/4 inches by 10 3/4 inches. Liners and most field tiles are available in 34 colors; the 5-inch-by-10-inch and 10-inch-by-10-inch sizes come in seven iridescent colors. The tiles' 3/8-inch-plus thickness makes them suitable for mixed-media installations, the maker says.
