**OCEANSIDE GLASSTILE INTRODUCES NEW SILKEN MATTE FINISH,
NEW STRIKING COSMOPOLITAN COLORS**

***New Finish Option and New Colors in Handcrafted Glass Tile
Now Available in All Product Lines***

Carlsbad, Calif. – June 3, 2008 – Oceanside Glasstile announced today the addition of a new matte finish option for its handcrafted glass tile in addition to its popular light capturing iridescent and richly translucent non-iridescent finishes.

Once available only in the company's Ritual Line in a limited color palette, matte finish is now available in all colors across all seven of the company's versatile lines of mosaics, field, decorative accent pieces and trim: Tessera, Facets™, Geologie, Elevations™, Casa California®, Terrain™, and Haiku®.

"Matte finish, like subtle mood lighting, creates a sophisticated, soothing environment that makes a dramatic design statement using color and texture," said New Product Designer, Feras Irikat. "Handcrafted glass tile looks dramatically different in a matte finish, offering designers even more options than before. Dimensional relief pieces in particular take on an entirely different character."

In addition to the new matte finish, Oceanside Glasstile has also added three cosmopolitan colors to the palette available in all product lines: Shadow (a cool gray), Henna (a rich cinnamon hue), and Truffle (a warm chocolate).

"Both the new matte finish and cosmopolitan colors are sophisticated additions that work beautifully in all of Oceanside Glasstile's seven distinctive product lines," according to Irikat. "The new colors are contemporary interpretations of traditional classics offering subtle color that integrates well with many different design palettes and architectural styles."

A green building material, Oceanside Glasstile is made from silica sand, an abundant natural resource, with many colors also containing post-consumer recycled bottle glass and/or glass recycled from the company's manufacturing process. Each year the company uses over 2 million pounds of glass from curbside recycling programs, turning waste that would otherwise end up in landfills into beautiful and sustainable design materials.
